

**Name:** \_\_\_\_\_**Roll #:** \_\_\_\_\_**Section:** \_\_\_\_\_**HW-2.3**

1. (34 points) Prove that the following argument form is valid using only the standard valid argument forms and logical equivalences. **Make sure you arrange your arguments in the given order 1., 2., 3., 4., 5. & then 6.:**

- A.  $p \rightarrow (t \wedge r)$   
 B.  $\sim q$   
 C.  $u \vee \sim p$   
 D.  $(u \wedge r) \rightarrow \sim s$   
 E.  $\sim p \rightarrow q$   
 $\therefore \sim s$

**Practice Problem:**

- A.  $t \rightarrow s$   
 B.  $(\sim t \vee p) \rightarrow q$   
 C.  $\sim s$   
 D.  $r \vee \sim p$   
 E.  $(\sim t \wedge q) \rightarrow \sim r$   
 $\therefore \sim p$

a) (2 points) Define what it means to say an argument (**not** argument *form*) is valid.

A.  $p \rightarrow (\sim q \vee r)$

B.  $p \wedge \sim q$

C.  $\therefore \sim r$

Define what it means for the above argument *form* to be valid.

c) (18 points) Construct a single complete truth table with A, B, & C (in that order) as defined in part b) above in the last 3 columns. Then determine if the argument form given in b) is valid or invalid and justify your answer using **only the definition** of a valid argument form. Use as many rows & columns as you need in the following table.

[illegible]

3. (62 points) For each of the following arguments, define the statement variables  $p, q$  &  $r$  etc. and write its argument form in the box provided. State if the argument is valid or invalid and prove your answer without using the truth tables. **USE COMPLETE SENTENCES.**

- a) Premise 1: If my son finished his food, then he got the dessert.  
Premise 2: My son didn't finish his food.  
Conclusion:  $\therefore$  My son didn't get the dessert.

$p =$  \_\_\_\_\_

$q =$  \_\_\_\_\_

Argument form

Premise 1: \_\_\_\_\_

Premise 2: \_\_\_\_\_

Conclusion:  $\therefore$  \_\_\_\_\_

Answer:

- b) Let  $x$  &  $y$  be fixed real numbers:  
Premise 1: If  $xy = 0$ , then either  $x$  or  $y$  is zero.  
Premise 2: Either  $x$  or  $y$  is zero.  
Conclusion:  $\therefore xy = 0$ .

$p =$  \_\_\_\_\_

$q =$  \_\_\_\_\_

Argument form

Premise 1: \_\_\_\_\_

Premise 2: \_\_\_\_\_

Conclusion:  $\therefore$  \_\_\_\_\_

Answer:

- c) Premise 1: If I studied hard, then either I got A or took a vacation.  
Premise 2: I neither got A nor took a vacation.  
Conclusion:  $\therefore$  I didn't study hard.

$p =$  \_\_\_\_\_

$q =$  \_\_\_\_\_

$r =$  \_\_\_\_\_

Argument form

Premise 1: \_\_\_\_\_

Premise 2: \_\_\_\_\_

Conclusion:  $\therefore$  \_\_\_\_\_

Answer:

d) Premise 1: Melanie either took the quiz or provided documentation for absence.

Premise 2: Melanie provided documentation for absence.

Conclusion:  $\therefore$  Melanie did not take the quiz.

$p =$  \_\_\_\_\_

$q =$  \_\_\_\_\_

Answer:

Argument form

Premise 1: \_\_\_\_\_

Premise 2: \_\_\_\_\_

Conclusion:  $\therefore$  \_\_\_\_\_

e) Premise 1: If 4 GB is better than no memory at all, then we will either buy more memory or buy a new computer.

Premise 2: If we will buy a new computer, then we will not buy more memory.

Conclusion:  $\therefore$  If 4 GB is better than no memory at all, then we will buy a new computer.

$p =$  \_\_\_\_\_

$q =$  \_\_\_\_\_

$r =$  \_\_\_\_\_

Answer:

Argument form

Premise 1: \_\_\_\_\_

Premise 2: \_\_\_\_\_

Conclusion:  $\therefore$  \_\_\_\_\_

f) Premise 1: If I studied hard, then I got A.

Premise 2: If I got A, then I took a vacation.

Conclusion:  $\therefore$  I took a vacation.

$p =$  \_\_\_\_\_

$q =$  \_\_\_\_\_

$r =$  \_\_\_\_\_

Answer:

Argument form

Premise 1: \_\_\_\_\_

Premise 2: \_\_\_\_\_

Conclusion:  $\therefore$  \_\_\_\_\_
